

# V120-22-R1 Graphic Operator Panel & Programmable Logic Controller

12/24VDC, 10 pnp/npn digital inputs, 1 analog input, 3 high-speed counter/shaft encoder inputs, 6 relay outputs, I/O expansion port, 2 RS232/RS485 ports

<b>Power supply</b>	12VDC or 24VDC
Permissible range	10.2VDC to 28.8VDC with less than 10% ripple
Maximum current consumption	230mA@24VDC (pnp inputs) 310mA@24VDC (npn inputs) 330mA@12VDC (pnp inputs) 360mA@12VDC (npn inputs)
<b>Digital inputs</b>	10 pnp (source) or npn (sink) inputs. See Note 1.
Nominal input voltage	12VDC or 24VDC. See Notes 2 and 3.
Input voltages for pnp (source):	
For 12VDC	0-3VDC for Logic '0' 8-15.6VDC for Logic '1'
For 24VDC	0-5VDC for Logic '0' 17-28.8VDC for Logic '1'
Input voltages for npn (sink):	
For 12VDC	8-15.6VDC/<1.2mA for Logic '0' 0-3VDC/>3mA for Logic '1'
For 24VDC	17-28.8VDC/<2mA for Logic '0' 0-5VDC/>6mA for Logic '1'
Input current	4mA@12VDC 8mA@24VDC
Input impedance	3KΩ
Response time (except high-speed inputs)	10mS typical
Galvanic isolation	None
Input cable length	Up to 100 meters, unshielded
<b>High-speed counter</b>	Specifications below apply when inputs are wired for use as a high-speed counter input/shaft encoder. See Notes 4 and 5.
Resolution	32-bit
Input frequency	10kHz max.
Minimum pulse	40μs

**Notes:**

- All 10 inputs can be set to pnp (source) or npn (sink) via a single jumper and appropriate wiring.
- All 10 inputs can function in 12 VDC or 24 VDC; set via a single jumper and appropriate wiring.
- npn (sink) inputs use voltage supplied from the controller's power supply.
- Inputs #0, #2 and #4 can each function as either high-speed counter or as part of a shaft encoder. In each case, high-speed input specifications apply. When used as a normal digital input, normal input specifications apply.
- Inputs #1, #3 and #5 can each function as either counter reset, or as a normal digital input; in either case, specifications are those of a normal digital input. These inputs may also be used as part of a shaft encoder. In this case, high-speed input specifications apply.

**Warnings:**

- Unused pins should not be connected. Ignoring this directive may damage the controller.
- Improper use of this product may severely damage the controller.
- Refer to the controller's User Guide regarding wiring considerations.
- Before using this product, it is the responsibility of the user to read the product's User Guide and all accompanying documentation.

**Power supply, pnp (source) inputs**

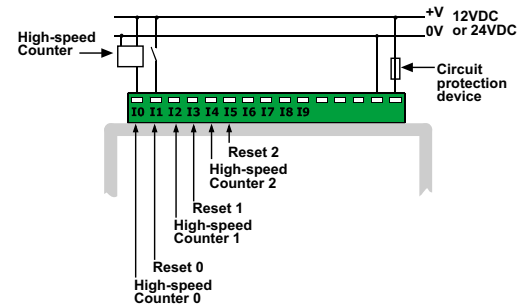

Note:  
To avoid electromagnetic interference, mount the controller in a metal panel/cabinet and earth the power supply. Earth the power supply signal to the metal using a wire whose length does not exceed 10cm. If your conditions do not permit this, do not earth the power supply.

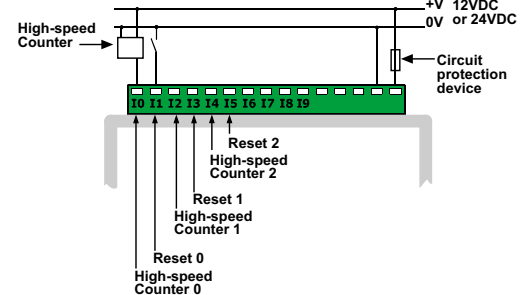

**npn (sink) inputs**

**pnp (source) high-speed counter**

**npn (sink) high-speed counter**

**Shaft encoder**

<b>Analog Input</b>	10-bit, multi-range input: 0-10V 0-20mA, 4-20mA
Conversion method	Successive approximation
Input impedance	>100K $\Omega$ for voltage 500 $\Omega$ for current
Galvanic isolation	None
Resolution (except 4-20mA)	10-bit (1024 units)
Resolution at 4-20mA	204 to 1023 (820 units)
Conversion time	According to filter
Absolute max. rating	$\pm 15V$
Full scale error	$\pm 2$ LSB
Linearity error	$\pm 2$ LSB
Status indication	Yes, see Note

Note:

The analog value can also indicate when the input is functioning out of range.  
If an analog input deviates above the permissible range, its value will be 1024.

### Voltage connection

Notes:

- Shields should be connected at the signals' source.
- The 0V signal of the analog input must be connected to the controller's 0V.

### Current connections

Notes:

- Shields should be connected at the signals' source.
- The 0V signal of the analog input must be connected to the controller's 0V.

<b>Digital outputs</b>	6 relay outputs, 230VAC/ 12/24VDC
Output type	SPST-NO relay
Type of relay	Takamisawa (Fujitsu) JY-12H-K, or NAIS (Matsushita) JQ1A-12V or OMRON G6B-1114P-12VDC
Isolation	by relay
Output current	5A max. (resistive load) 1A max. (inductive load)
Max. frequency	0.5Hz (at maximum rated load)
Contact protection	External precautions required

### Relay Outputs

<b>Graphic Display</b>	STN, LCD display
Illumination backlight	LED, yellow-green, software-controlled
Display resolution	128x64 pixels
<b>Keypad</b>	Sealed membrane
Number of keys	16

### Program

Application memory	448K
Memory Bits (coils)	2048
Memory Integers (registers)	1600
Long Integers (32 bit)	256
Double Word (64 bit unsigned)	64
Floats	24
Timers	192
Counters	24
Data Tables	120K (RAM) / 64K (FLASH)
HMI displays	Up to 255
Execution time	0.8 $\mu$ s for bit operations

### RS232/RS485 serial ports

Used for:	<ul style="list-style-type: none"> <li>Application Download/Upload</li> <li>Application Testing (Debug)</li> <li>Connect to GSM or standard telephone modem: <ul style="list-style-type: none"> <li>Send/receive SMS messages</li> <li>Remote access programming</li> </ul> </li> <li>RS485 Networking</li> </ul>
-----------	---

<b>RS232</b> (see note)	2 ports
Galvanic isolation	None
Voltage limits	$\pm 20V$
<b>RS485</b> (see note)	2 ports
Input voltage	-7 to +12V differential max.
Cable type	Shielded twisted pair, in compliance with EIA RS485
Galvanic isolation	None
Baud rate	110 – 57600 bps
Nodes	Up to 32

Note:

RS232/RS485 is determined by jumper settings and wiring.  
Refer to the controller's User Guide regarding communications.

<b>I/O expansion port</b>	Up to 128 additional I/Os, including digital & analog I/Os, RTD and more.
---------------------------	---

### Miscellaneous

Clock (RTC)	Real-time clock functions (Date and time).
Battery back-up	7 years typical battery back-up for RTC and system data.
Battery	Coin type, 3V lithium battery, CR2450
Weight	320g (11.3 oz.)
Operational temperature	0 to 50 $^{\circ}$ C (32 to 122 $^{\circ}$ F)
Storage temperature	-20 to 60 $^{\circ}$ C (-4 to 140 $^{\circ}$ F)
Relative Humidity (RH)	5% to 95% (non-condensing)
Mounting method	DIN-rail mounted (IP20/NEMA1) Panel mounted (IP65/NEMA4X)

The tables below show how to set a specific jumper to change the functionality of the controller. To open the controller and access the jumpers, refer to the directions at the end of these specifications.

**Important:**

Incompatible jumper settings and wiring connections may severely damage the controller.

**JP1  
Digital inputs type**

To use as	JP1
npn (sink)	A
pnp (source)*	B

**JP5, JP6  
Power supply voltage**

Range	JP5	JP6
10.2 to 15.6VDC	A	A
15.6 to 28.8VDC*	B	B

**JP2  
Digital inputs voltage**

To use as	JP2
12VDC	A
24VDC*	B

**JP3  
Analog input type**

To use as	JP3
Voltage input*	A
Current input	B

\*Default factory setting

**In this figure, the jumper settings will cause the controller to function as follows:**

- Digital inputs: npn, 24VDC inputs
- Analog input: Voltage input
- Power supply: 24VDC

**Opening the controller's enclosure**

1. Turn power off before opening the controller.
2. Locate the 4 slots on the sides of the enclosure.
3. Using the blade of a flat-bladed screwdriver, gently pry off the back of the controller as shown in the figure below, exposing the controller's board.

Unitronics reserves the right to revise this publication from time to time and to amend its contents and related hardware and software at any time.

Technical updates (if any) may be included in subsequent editions (if any).

Unitronics product sold hereunder can be used with certain products of other manufacturers at the user's sole responsibility.
